
WHY YOU SHOULD BE HYDROLAZING

BEFORE STEAM & AIR BLOWS

HYDROLAZING

Is a high-pressure water jetting cleaning method that can be used to remove:

- Mill-scale
- Construction debris
- Process deposits with high-pressure

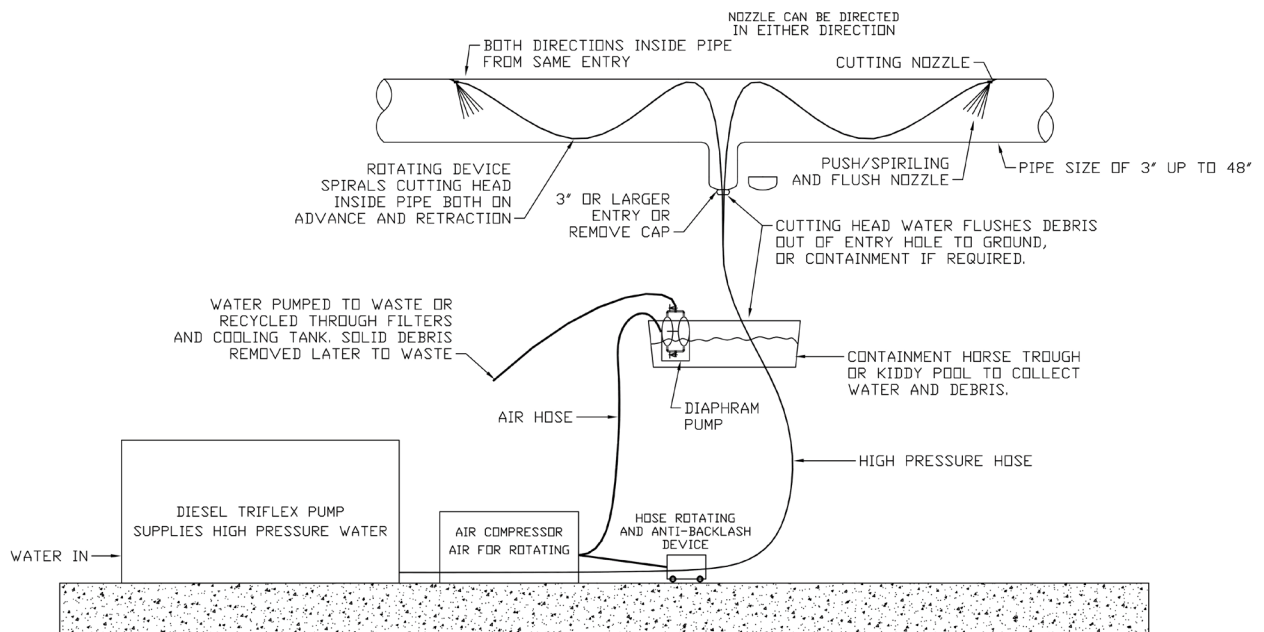

Benefits include:

- Reduces the cleaning times and costs of steam and air blowing services by up to 75%
- Requires 80% less de-mineralized water
- Cuts natural gas requirements in half
- Zero environmental impact because no chemicals are required
- Shaves 5-8 days off of average steam blowing procedures

Hydrolazing effectively pre-commissions or maintenances:

- 2x1 HRSG plant equipment
- Process equipment experiencing degraded performance from water contamination or process deposits
- Process pipes at lower cost than chemical cleaning
