

RE-STARTING YOUR PLANT: SERVICES FOR PROTECTING YOUR WORKFORCE AND MACHINERY

RIG stands ready to assist plant facilities in making the re-start process as smooth as possible.

As North America comes out of isolation, plant managers, maintenance teams, and individual employees will assess the risk and impact of COVID-19. Some common concerns include:

- How do we assure our people are not going to pass along the virus and start a second wave?
- What machinery issues can arise with forced downtime, delayed maintenance, and system re-starts?
- How can we save costs with the Covid-19 financial impact?

At Reliable Industrial Group, we are ready to assist plants who need to protect both their workforce and machinery. Whether you are restarting systems, increasing or changing production, pushing out pre-commissioning activities, delaying scheduled maintenance, or looking for cost saving programs our team of certified plant technicians can be on-site within 48 hours anywhere in the U.S.

To protect your employees from COVID-19, we offer Coronavirus Cleaning Services that disinfect hightraffic, high touch areas such as control rooms, bathrooms, common areas and more. Thorough disinfection and virus spread prevention can be done between shifts, daily or weekly to give your staff confidence that they are not endangering loved ones as they come home from their workplace.

Many plants were forced to quickly pivot, shutdown or change production with skeleton crews to help prevent the spread of Covid-19. In many cases, this meant there was no time for thorough shut down or foreign material exclusion processes to take place, which can place machinery at risk long-term.

RIG's trained personnel are ready to help keep you up and running. Whether you are restarting, re-tooling, or

looking for long-term cost savings, our team of certified plant reliability technicians can help. We offer:

- Lubricant sampling and analysis to identify potential machine wear and lubricant degradation
- Lubricant re-conditioning and recycling services which reduce the cost of purchasing new oil
- Filter and breather replacement
- Emergency lubricant water and particulate removal services
- Reservoir cleaning and varnish removal services
- Steam and air blowing to eliminate debris in piping and other systems
- Hydrolazing services, which are an environmentally friendly way to scrape debris and contaminants from piping internals
- Chemical cleaning, varnish mitigation and oil flushing services which thoroughly remove contaminants and varnish.

In addition, some of our service programs are designed to save you time and money during these uncertain times. Our "Best-In-Class" Lubrication Programs lower long-term costs by creating a custom lubrication and maintenance program that ensure machines are always operating at OEM recommended ISO levels, recycling or reconditioning oil to lower the cost of purchasing new oil, and providing embedded technicians when appropriate.

Our partnership with ExxonMobil Lubricants as the MobilServSM Integrated Lubrication Services Program Provider allow us to work with your team's lubrication needs from cradle to grave for each piece of machinery. For help coming back on-line or additional information on any of the programs email: info@therigteam.com or call 800-770-4510.

We stand with those who make the world work!
